

FeneMan's 10 ways to re-establish and keep control, flexibility, quality, speed and service in your fenestration business – no matter how busy you get.

1. End costly data re-entry

Re-entering the same information wastes time all over your facility. What if you could create a quote, turn it into an order, schedule it into production, ship and bill it – and enter it only once? With FeneVision and Fenetech, you can – even if you keep your current accounting system.

2. Stop creating paper work orders

Printing the schedule for each workstation doesn't just cost you lots of paper. It's time consuming, especially when things change and new schedules have to go out during a shift. Plus, there are all the things that happen when a piece of paper gets lost and no one notices.

3. Make scheduling less of a production unto itself

Wouldn't it be nice if scheduling production for a shift didn't take so long or have to be done so far in advance? If you could accommodate last minute orders for special customers or changes to already scheduled work? With FeneVision, scheduling a shift usually takes one to three hours and can be done routinely the afternoon before.

4. Reduce rework

Tired of production mistakes that waste raw materials, slow down the floor and annoy customers? With FeneVision's View and Do approach to fenestration, your employees see the size, color and features for each unit they're making. Not only does it help reduce rework, View and Do also makes it easy to train your staff.

5. Stop silly shipping mistakes

You nurture relationships, make the best windows and doors going and have the shortest lead times out there. But if you miss deadlines because the wrong windows got on the right truck or the right ones didn't, you can still lose customers. FeneVision greatly reduces embarrassing miss-shippments by displaying a big stop sign on the shipping station screen if someone scans the wrong units or fails to scan the right ones for a truck.

6. Give instant order status from a computer anywhere

Walking around the plant to determine the status of an order does more than just eat up lots of time. It also means you have to always get back to customers later in an era when they expect – and can get – fast answers. With FeneVision, you can see the status of every order in all your facilities right from your desk or from a web browser wherever you are.

7. Make consistency your hallmark

Customers like consistency. With the advanced fenestration integration and manufacturing knowledge in FeneVision, you can readily schedule and produce more units in the same period of time. By the way, when that happens, you also make more money.

8. Get integrated faster

As the only system designed, sold and supported by experienced manufacturing engineers, FeneVision from FeneTech is the faster way to get your facility on the road to the benefits of true fenestration integration. We can get online every automatable and integratable piece of equipment in your facility and have existing interfaces for many of them. We can integrate FeneVision to any existing software in your facility you prefer to keep.

9. Get smarter manufacturing

Requirements for all units are compared, then sorted and routed for efficient production. Like units are combined across production to minimize fixture changes. The dynamic configurator allows you to price and make any unit described without calling a programmer. Lineal optimization provides high raw material yields in every batch that goes through your facility. These are just a few of the advanced and proven capabilities you get with FeneVision.

10. Enjoy the benefits of real support

At FeneTech, we don't just ask for an order, then ship you a disk. We get onsite with you to learn about your business, then help you to plan, train for and implement your new fenestration system. Getting it right saves lots of time, money and frustration which lets you enjoy all the benefits of true fenestration integration sooner. It's just one more reason we've become the fastest growing fenestration systems provider.

True fenestration integration

FENEVISION PRODUCTION CONTROL • FENEVISION INFORMATION CENTER • FENEVISION TRACKING SYSTEM • FENETECH SYSTEMS INTEGRATION
Quotation • Order entry • Pricing • Dynamic product configurator • Capacity planning • Scheduling • Raw material optimization • Machine interfaces
Inventory control • Bar code integration • Invoicing • Remote order entry • Web-based real time status • Shipping management • Accounting integration
