

What is fenestration integration?

When you hear the term fenestration integration, what image comes to mind?

Not much? You're not alone. It can be hard to see what others imagine when they use the words.

The FeneVision definition might help. We see it as connecting all the people and work in your business to improve the flow of products and benefits to your customers. This will improve the flow of cash coming back to you.

When people and work are effectively connected, good things happen. People enter data once, which reduces errors. Remakes are handled systematically. Pricing and scheduling are more flexible and accurate. Time from order acceptance to complete on truck decreases.

It becomes easy to see job status, so it is easy to set customer expectations. You get more product—and more kinds of product—through the plant every day.

Costs go down. And you know where and why.

Production is at the heart of your business. It touches everything else you do. At FeneTech, production engineering is our core expertise. But we also see your entire business. FeneTech is the only fenestration integration provider whose staff can connect all the equipment and applications in your company into one integrated system.

Ready to improve the flow of your business? We give you one point of contact for getting automation improvements done. For more information, call our business development group at **330-995-2830** today.
